Weekly Viz Report #2

https://www.reddit.com/r/dataisbeautiful/comments/10r0n5s/location_of_stadiums_arenas_and_ballparks_in/

The visualization I chose for this week was again from the reddit thread, Data Is Beautiful. I thought this visualization of how far professional sports stadiums are from their cities downtown was a super relevant and interesting visualization. The Chicago Bears are thinking of moving from Soldier Field, which is one of the closest stadiums to its downtown, all the way to the suburbs in Arlington Heights, over 15 miles away. It is interesting to look at the outliers, such as the San Francisco 49ers, who's stadium is 35 miles, which is the farthest distance from any of the cities downtowns.
